The Dissection Process at Michigan State University

Preparation and Safety Protocols

Before beginning the dissection, students are briefed on safety measures, including proper handling of scalpels, scissors, and dissection pins. Personal protective equipment such as gloves, lab coats, and goggles are provided to ensure safety. Clear instructions are given on waste disposal and hygiene practices to maintain a safe laboratory environment.

Step-by-Step Dissection Procedure

- External Examination: Observation of the perch's external features, including fins, scales, coloration, and body shape.
- Initial Incision: Using scissors or a scalpel to make a ventral incision along the abdomen, carefully avoiding damage to internal organs.
- Opening the Body Cavity: Gently pulling back the skin and musculature to reveal internal structures.
- Organ Identification: Locating and identifying organs such as the liver, stomach, intestines, swim bladder, heart, gills, and reproductive organs.
- Detailed Examination: Examining each organ's structure, position, and connections while noting physiological features.
- Documentation: Taking notes, drawing diagrams, or photographing key features for further study.

Post-Dissection Activities

After completing the dissection, students are encouraged to reflect on their observations, discuss their findings, and clean their workspace thoroughly. Some courses incorporate quizzes or reports to assess understanding and reinforce learning.
