Sample Questions and Detailed Answers from 2014 WAEC Economics Paper

Section A: Multiple Choice Questions (MCQs)

These questions tested factual knowledge and understanding of basic economic concepts.

- **Question:** Which of the following best defines the concept of scarcity in economics?

- A) The unlimited wants of humans
 - B) The limited availability of resources to satisfy unlimited wants
 - C) The excess of supply over demand
 - D) The process of economic growth
- **Answer:** B) The limited availability of resources to satisfy unlimited wants

- **Question:** In a free market, the price of a commodity is determined mainly by:
- A) Government regulation
 - B) The interaction of demand and supply
 - C) Producer's selling price
 - D) Consumer income levels
- **Answer:** B) The interaction of demand and supply

Section B: Structured Questions and Solutions

This section requires detailed responses and application of economic theories.

Question 1: Explain the concept of price elasticity of demand and discuss its significance in business decision-making.

Answer:

Price elasticity of demand measures how much the quantity demanded of a good responds to a change in its price. It is calculated as the percentage change in quantity demanded divided by the percentage change in price:

$$\text{Price Elasticity of Demand (PED)} = \frac{\text{change in quantity demanded}}{\text{change in price}}$$

]

Depending on the value of PED, demand can be classified as:

- **Elastic (>1):** Demand is sensitive to price changes. A small price change causes a significant

change in quantity demanded.

- **Inelastic (Demand is less sensitive to price changes. Quantity demanded changes little with price fluctuations.**
- **Unit elastic (=1): Percentage change in demand equals the percentage change in price.**

Significance in Business Decision-Making:

Understanding price elasticity helps businesses optimize pricing strategies. For products with elastic demand, lowering prices can increase total revenue, while for inelastic goods, raising prices might be beneficial without significantly reducing sales. It also influences decisions on advertising, production levels, and market entry strategies.

Question 2: Discuss the different types of market structures and highlight their characteristics.

Answer:

Market structures refer to the organization and characteristics of a market, primarily determined by the number of firms, the nature of products, and entry barriers. The main types include:

- **Perfect Competition:**
 - Large number of small firms
 - Homogeneous products
 - Free entry and exit
 - Price takers
 - Perfect knowledge among buyers and sellers
- **Monopoly:**
 - Single seller controls the entire market
 - Unique product with no close substitutes
 - High barriers to entry
 - Price maker
- **Monopolistic Competition:**
 - Many firms selling differentiated products
 - Relatively free entry and exit

- Firms have some control over prices
- Oligopoly:
 - Few large firms dominate the market
 - Products may be homogeneous or differentiated
 - High barriers to entry
 - Interdependence among firms affects pricing and output decisions

Analyzing Data and Graphs from the 2014 WAEC Economics Exam

Data interpretation questions were common in 2014, requiring candidates to analyze graphs and tables.

Sample Data Interpretation Question

Question:

The table below shows the demand for a commodity at different prices:

| Price (Naira) | Quantity Demanded (units) |

|-----|-----|

| 50 | 200 |

| 40 | 300 |

| 30 | 400 |

| 20 | 500 |

| 10 | 600 |

Calculate the price elasticity of demand between the prices of 50 and 40 Naira.

Solution:

- Determine the change in quantity demanded:

\[

$$\Delta Q = 300 - 200 = 100$$

\]

- Determine the change in price:

\[

$$\Delta P = 40 - 50 = -10$$

\]

- Calculate the average quantity and average price:

\[

$$Q_{\text{avg}} = \frac{200 + 300}{2} = 250$$

\]

\[

$$P_{\text{avg}} = \frac{50 + 40}{2} = 45$$

\]

- Calculate the percentage changes:

\[

$$\% \text{ Change in } Q = \frac{100}{250} \times 100 = 40\%$$

\]

\[

$$\% \Delta P = \frac{-10}{45} \times 100 \approx -22.22\%$$

]

- Calculate PED:

[

$$PED = \frac{40}{-22.22} \approx -1.8$$

]

Interpretation:

The demand between these two prices is elastic ($PED > 1$ in absolute value), indicating that a 1% decrease in price results in approximately a 1.8% increase in quantity demanded.

Question 1: Define and explain the law of demand. Illustrate your answer with a diagram.

Sample Answer:

The law of demand states that, *ceteris paribus*, as the price of a good or service increases, the quantity demanded decreases, and vice versa. This inverse relationship is due to the substitution effect and income effect, where consumers tend to buy less of a good when its price rises because it becomes relatively more expensive, and vice versa.

Diagram:

(Include a downward-sloping demand curve labeled D)

Explanation:

The demand curve slopes downward from left to right, indicating that at higher prices, consumers are willing to buy less, and at lower prices, they buy more.

Question 2: Discuss the causes of inflation and its effects on an economy.

Sample Answer:

Causes of Inflation:

- Excessive demand (Demand-pull inflation): When aggregate demand exceeds aggregate supply.
- Cost-push factors: Rising production costs, such as wages and raw materials, lead to increased prices.
- Monetary expansion: An increase in the money supply without a corresponding increase

in goods and services.

- Imported inflation: Rising prices of imported goods due to exchange rate depreciation.

Effects of Inflation:

- Reduced purchasing power: Consumers can buy less with the same amount of money.
- Uncertainty: Business planning becomes difficult, discouraging investment.
- Income redistribution: Fixed income earners suffer, while debtors may benefit.
- Wage-price spiral: Rising wages lead to higher prices, fueling further inflation.
