Compound interest significantly impacts long-term savings by allowing interest to be earned on both the initial principal and on accumulated interest from previous periods. This exponential growth can substantially increase wealth over time.

- Key concept: The earlier you start saving, the more you benefit from compounding.
- Example calculation: If you invest \$1,000 at an annual interest rate of 6%, compounded annually, after 20 years, the balance will be approximately \$3,207. This illustrates how compounding can nearly triple your investment over two decades.

- Choose accounts with higher interest rates or investment growth potential.

Question 2: What are the advantages and disadvantages of credit cards?

Answer:

Credit cards are powerful financial tools that offer both benefits and risks. Understanding these helps consumers make informed decisions.

Disadvantages:

- High-interest rates can lead to debt if balances are not paid in full.
