Background: The London Whale Incident

What Was the London Whale?

The "London Whale" refers to a series of large derivatives trades executed by JPMorgan Chase's Chief Investment Office (CIO) between 2012 and 2013. The most notable of these was a massive credit derivatives position, primarily managed out of London, which resulted in a \$6.2 billion loss for the bank. The incident drew global attention due to its scale, the complexity of the trades, and apparent supervisory failures.

How Did It Happen?

The London Whale's trades involved complex credit default swaps (CDS) designed to hedge the bank's credit risk. However, several factors contributed to the eventual loss:

- Risk Underestimation: The risk models used did not adequately capture the potential for market shifts.
- Internal Oversight Failures: Lack of effective oversight allowed risky positions to accumulate.
- Communication Gaps: Insufficient reporting and transparency prevented early detection of the accumulating risk.
- Management Oversight: Senior management failed to scrutinize the trading desk's activities effectively.

The Role of Supervisory Oversight in the London Whale E

Defining Supervisory Oversight

Communication and Reporting Lapses

- Delayed Escalation: Warning signs were not raised promptly to higher management levels.
- Poor Documentation: Trade documentation and decision records were incomplete or inadequate.

- Weak Internal Audit Function: Internal audit teams lacked the authority or capacity to challenge risky practices effectively.

External Supervisory Oversight and Regulatory Response

Regulatory Framework Pre- and Post-Incident

Before the incident, regulators relied heavily on risk-based capital requirements, stress testing, and periodic reporting. The incident exposed weaknesses in these frameworks, prompting regulatory bodies to review and strengthen oversight.
