Given the IR spectrum showing a broad absorption around 3300 cm^{-1} and a strong peak at 1700 cm^{-1} , identify the functional groups present.

Model Answer:

The broad absorption at 3300 cm^{-1} indicates O-H stretching, consistent with alcohols or carboxylic acids. The strong peak at 1700 cm^{-1} suggests C=O stretching, typical of carbonyl groups in aldehydes, ketones, or carboxylic acids. Combined, these features point to a carboxylic acid.
