Stages of Fetal Development

Fetal development is typically divided into three trimesters, each with distinct characteristics and milestones.

First Trimester (Weeks 1-12)

During this period, the fertilized egg implants into the uterine wall, and the foundational structures of the fetus form.

- **Fertilization and Implantation:** Conception occurs, usually around week 2, with the zygote implanting in the uterine lining.
- **Formation of Embryonic Structures:** Major organs and structures begin to develop, including the neural tube, heart, and limb buds.
- **Heartbeat:** Detectable via ultrasound around 6 weeks.
- **Size:** From fertilization, the embryo is about 0.1 inches long (~3 mm) by the end of week 4.

Second Trimester (Weeks 13-26)

This period is marked by rapid growth and maturation of organs.

- **Growth:** The fetus grows significantly, reaching about 14 inches and 1.5 pounds by the end of this trimester.
- **Development of Features:** Facial features become distinct; hair, eyebrows, and eyelashes develop.
- **Movement:** Fetal movements (quickening) are usually felt by the mother around 18-20 weeks.
- **Sensory Development:** The fetus begins to respond to stimuli such as light and sound.

Third Trimester (Weeks 27-Birth)

This final stage prepares the fetus for birth, with lungs and brain maturing.

- **Fat Accumulation:** Subcutaneous fat increases, smoothing skin and providing energy reserves.
- **Lung Maturation:** Alveoli develop, preparing the lungs for breathing outside the womb.
- **Positioning:** The fetus usually moves into a head-down position in preparation for delivery.
- **Growth:** The fetus reaches approximately 19-21 inches and weighs around 6-9 pounds at term.

Maternal Changes During Pregnancy

Pregnancy induces a wide range of physiological changes in the mother's body, supporting fetal development and adapting to the pregnancy.

Common Maternal Physiological Changes

- **Cardiovascular System:** Increased blood volume by about 30-50%; cardiac output rises.
- **Respiratory System:** Elevated oxygen consumption; diaphragm elevates, causing shortness of breath.
