What Are High Thrust Rigging Outboards?

Defining High Thrust Outboards

High thrust rigging outboards are a category of marine propulsion engines engineered specifically to produce significantly more thrust than standard outboards of similar horsepower ratings. Typically, they are designed with a larger lower unit, a specialized propeller, and reinforced gearcases to handle increased power and torque. The primary goal is to improve low-speed maneuverability, enhance thrust in demanding conditions, and provide greater control for a variety of vessel types.

The Concept of "Rigging" in Outboard Motors

In marine terminology, rigging refers to the process of installing, configuring, and sometimes customizing the outboard motor to suit specific vessel needs. Rigging involves attaching steering components, throttle controls, electrical wiring, and sometimes specialized accessories. When discussing high thrust outboards, rigging often emphasizes the tailored set-up required to optimize performance, including modifications to the mounting, steering, and power delivery systems.

Why Are They Called "FT" or High Thrust?

The abbreviation "FT" typically denotes High Thrust in the context of outboard motors. These motors are characterized by their ability to generate higher thrust levels—often 25% to 50% more than standard models—making them suitable for applications where low-speed power and control are critical. The "high thrust" designation underscores their primary advantage: superior low-end power and torque, which are essential for tasks like trolling, pushing heavy loads, or navigating shallow waters.

Technical Features of High Thrust Rigging Outboards
