- Safety and prevention: Understanding risk factors and safety measures helps prevent complications.

A well-structured Quizlet set targeting pediatric neuro problems allows students to familiarize themselves with these critical areas through active recall and spaced repetition, which are proven methods to improve long-term retention.

Common Pediatric Neurological Disorders Covered in NCLEX Questions

To excel in NCLEX, students must be familiar with a variety of pediatric neuro conditions frequently tested. Here's an overview of the most common:

1. Seizure Disorders

Seizures are a prevalent neurological concern in pediatrics. NCLEX questions may test on:

- Types of seizures (focal, generalized, absence)
- Recognizing seizure activity
- Immediate interventions (e.g., ensuring safety, airway management)
- Medication administration (antiepileptics)
- Postictal care

2. Increased Intracranial Pressure (ICP)

Increased ICP can result from trauma, infection, or tumors. Key points include:

- Symptoms: headache, vomiting, altered consciousness, cranial nerve deficits
- Monitoring ICP (e.g., intracranial pressure monitoring devices)
- Nursing care strategies to reduce ICP (e.g., positioning, sedation)
- Recognizing signs of herniation

Sample Pediatric Neuro NCLEX Questions and Rationales

Practicing with sample questions enhances exam readiness. Here are some examples with detailed rationales:

Question 1:

A 4-year-old child presents with sudden onset of eye deviation, drooling, and difficulty swallowing. What is the most appropriate nursing intervention?

- a) Administer antihistamines
- b) Maintain airway patency and prepare for possible intubation
- c) Encourage oral fluids to hydrate the child
- d) Place the child in a supine position immediately

Answer: b) Maintain airway patency and prepare for possible intubation

Rationale:

The child's symptoms suggest a neurological emergency, possibly a seizure or airway compromise. Ensuring airway patency is critical, and preparedness for airway intervention is essential. Antihistamines are not indicated unless allergic reactions are suspected. Encouraging oral fluids may risk aspiration if swallowing is impaired. Positioning should support airway management, not necessarily in a supine position if airway compromise exists.

Question 2:

Which of the following signs indicates increased intracranial pressure in a pediatric patient?

- a) Hypotension
- b) Bounding pulse
- c) Sunsetting eyes
- d) Decreased respiratory rate

Answer: c) Sunsetting eyes

Rationale:

Sunsetting eyes, where the sclera is visible above the iris, is a classic sign of increased ICP in children. Hypotension and bounding pulses are more associated with septic shock, and decreased respiratory rate may occur but is less specific for ICP.
